

VECTOR

The voice compass for cyclists. Screen off. Eyes on the trail.

“Target at 3 o’clock — eight kilometres.”

Not turn-by-turn. A beacon: pick a target, pocket the phone, ride any way you like — the voice keeps you pointed the right way. Roads optional.

Android · Google Play (internal testing) · RU / EN / DE · free

Not a navigator. A beacon.

Classic navigation reads you turns and owns your route. Vector does the opposite: it tells you WHERE the target is — clock-style, like a wingman — and lets YOU choose the way. Side streets, forest cut-throughs, gravel, stairs. Exploration stays yours.

- **Screen off, voice on**

Foreground GPS keeps guiding from your pocket for hours — tested on real rides, with music and calls.

- **Clock-face bearings**

"Target at 12" means dead ahead. Distance and ETA at your chosen interval, plus a cue when you turn away.

- **Aiming mode**

Stand still, rotate the phone — "target ahead!" — and push off. A chime confirms every time you cross the bearing.

- **Offline maps**

Cache the area in advance; navigation itself never needs internet.

- **Rides journal + GPX**

Track, distance, time, average — export GPX to Strava or anywhere.

- **Private by design**

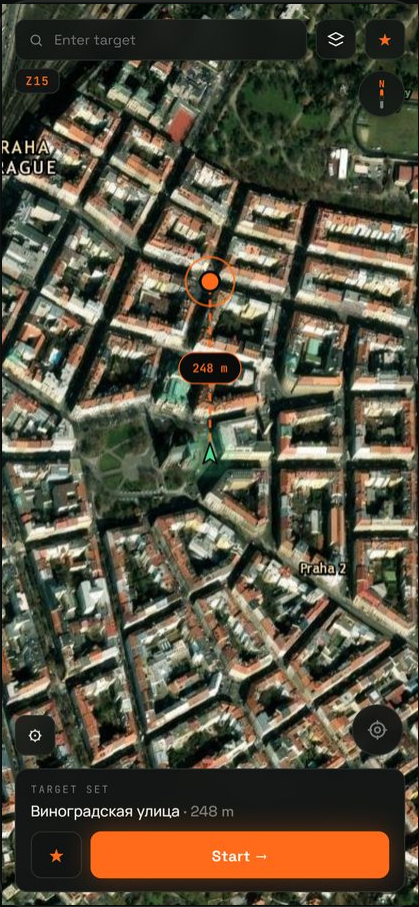

No accounts, no ads, no telemetry. Your trails never leave the phone.

On the screen — when you look at all

Dark, glanceable, glove-friendly. Interface in English, Russian and German.

Pick a target on the map

...or by search · distance shown

Cache the area for offline

Aim: rotate till "target ahead"

Ride: bearing · distance · ETA

94 m to go — almost there

Any terrain. Roads optional.

Mountain ridge, city stairs, a river ford — the beacon does not care. It only ever answers one question: “where is my target?” The rest of the adventure is yours to invent.
